

UNEP(United Nations Environment Programme):

1.The Role of Extractives in Pollution and Resource Consumption:

Extractives refer to the use of resources such as oil, gas, and minerals all of which play a crucial role in our world economy. However, extractives are detrimental to both people and the environment, thus requiring a dialogue about our future use of such resources.

2.Sustainable Development of Water Infrastructure:

2005 to 2015 was titled 'Water for Life' International Decade of Action, but despite the progress made during this decade water scarcity still affects more than 40% of people around the world. A critical step to achieve water security and using this resource efficiently is working to identify and improve flaws in water infrastructure.
